

CLIFTON

Clifton - 10052

With a 41 mm diameter, this Clifton model inspired by a Baume & Mercier watch dating from the 1950s comes in a round case with thin, curved lugs. A traditional timepiece with its sun satin-finished silver-colored dial with Arabic numerals, water-resistant to 50 meters, and driven by a mechanical self-winding caliber visible through a transparent sapphire crystal case-back. Worn with a black alligator strap closed by an adjustable triple folding buckle with security push-pieces, this model epitomizes those chic city values that we instinctively identify with a timeless charm all of their own.

Technical Description
